

# User Guide

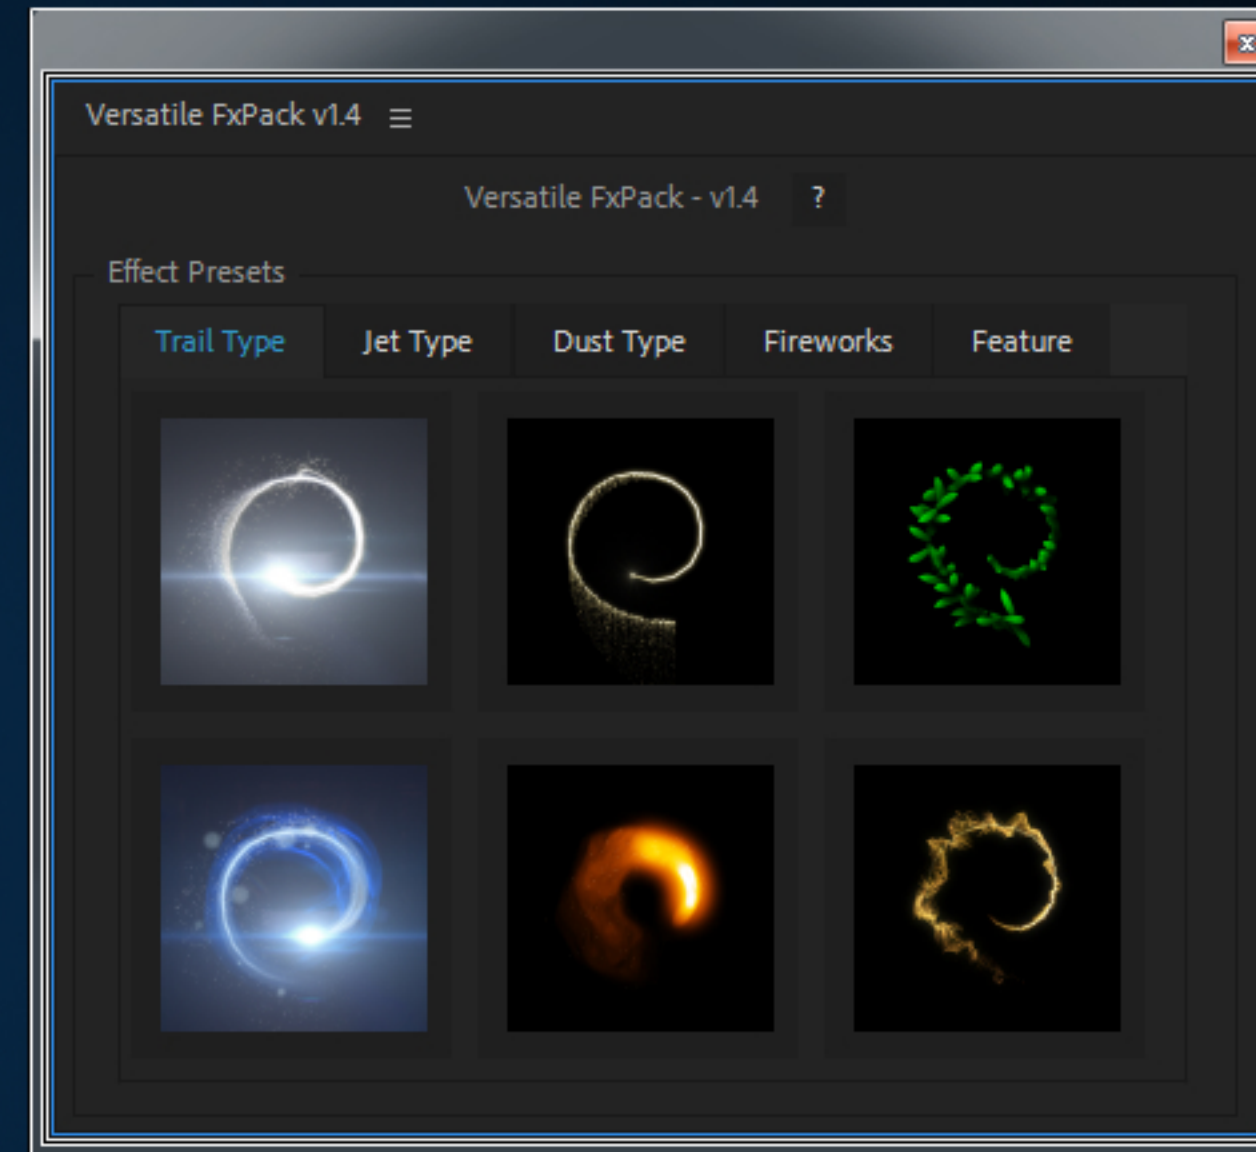

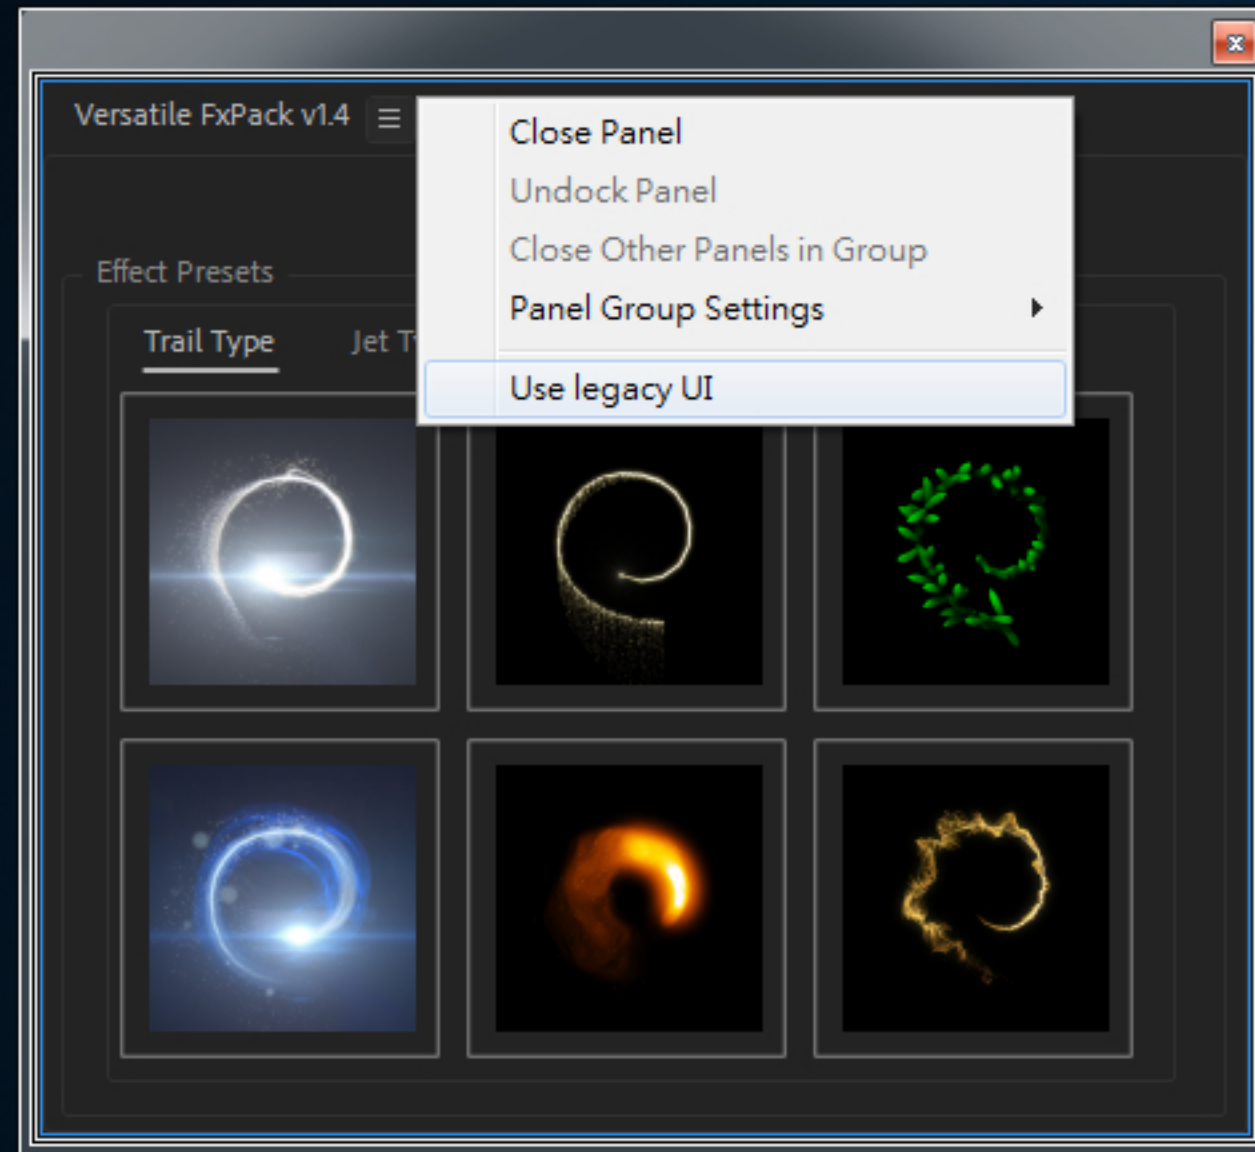

Choose Versatile FxPack in the bottom of Window Menu.

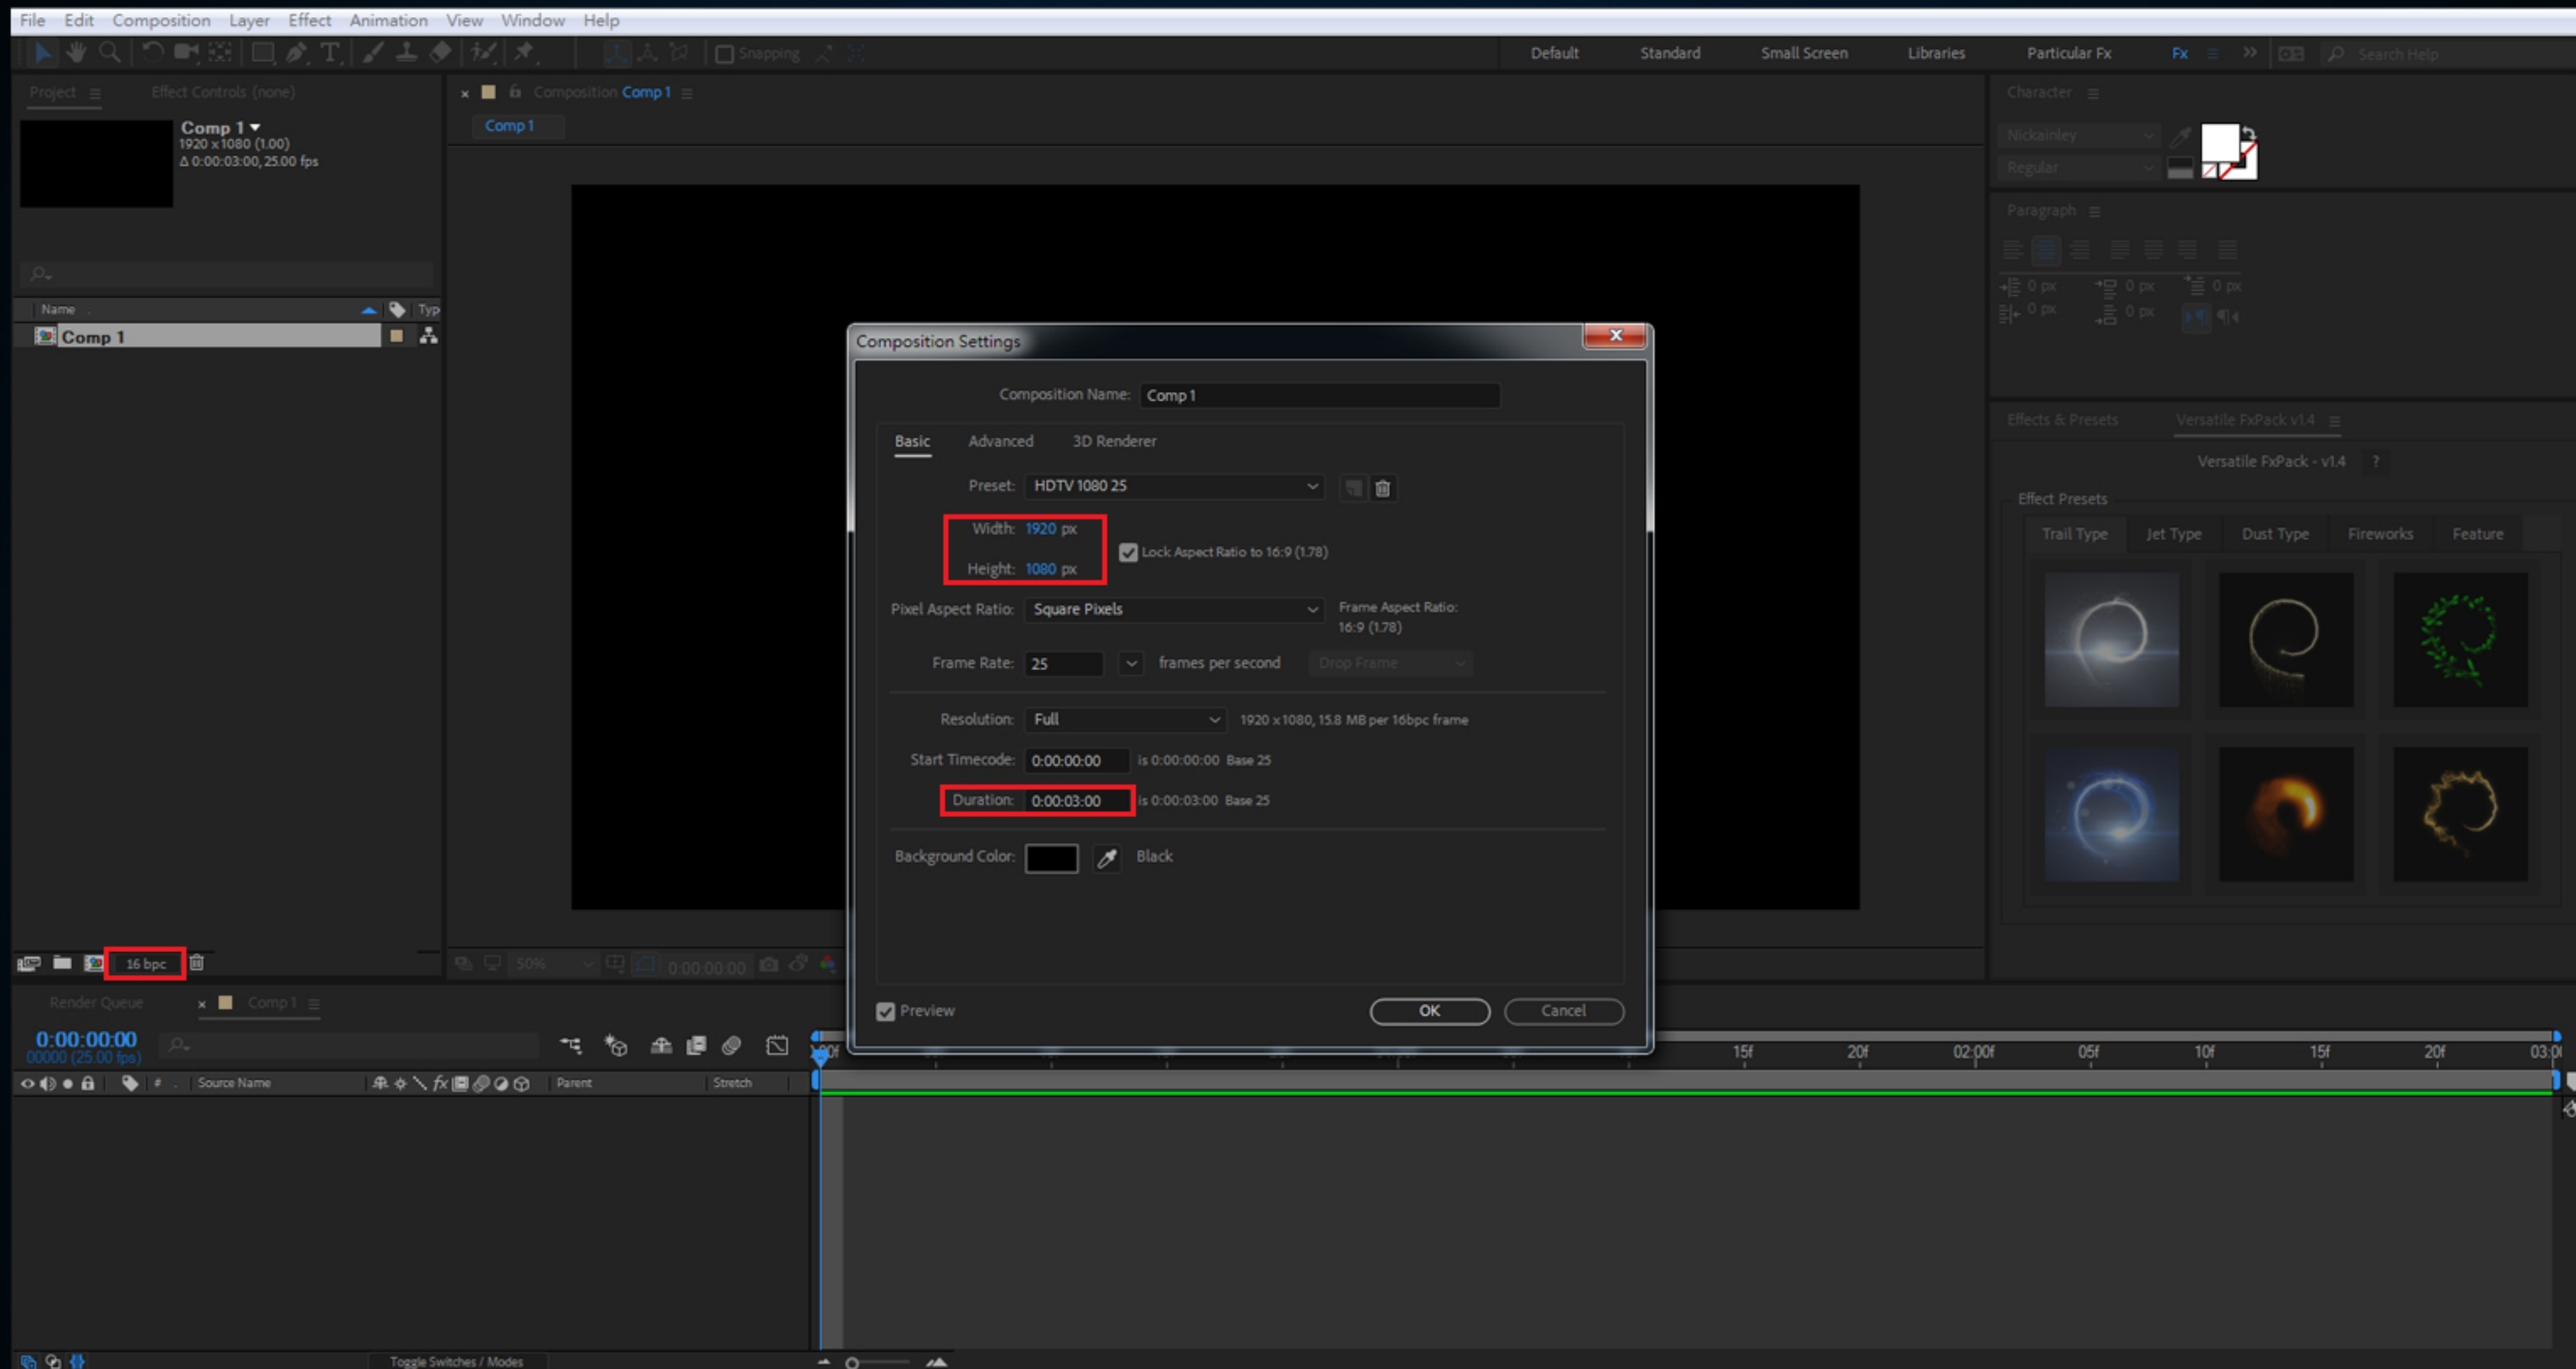

Versatile FxPack use dockable and resizable panel.

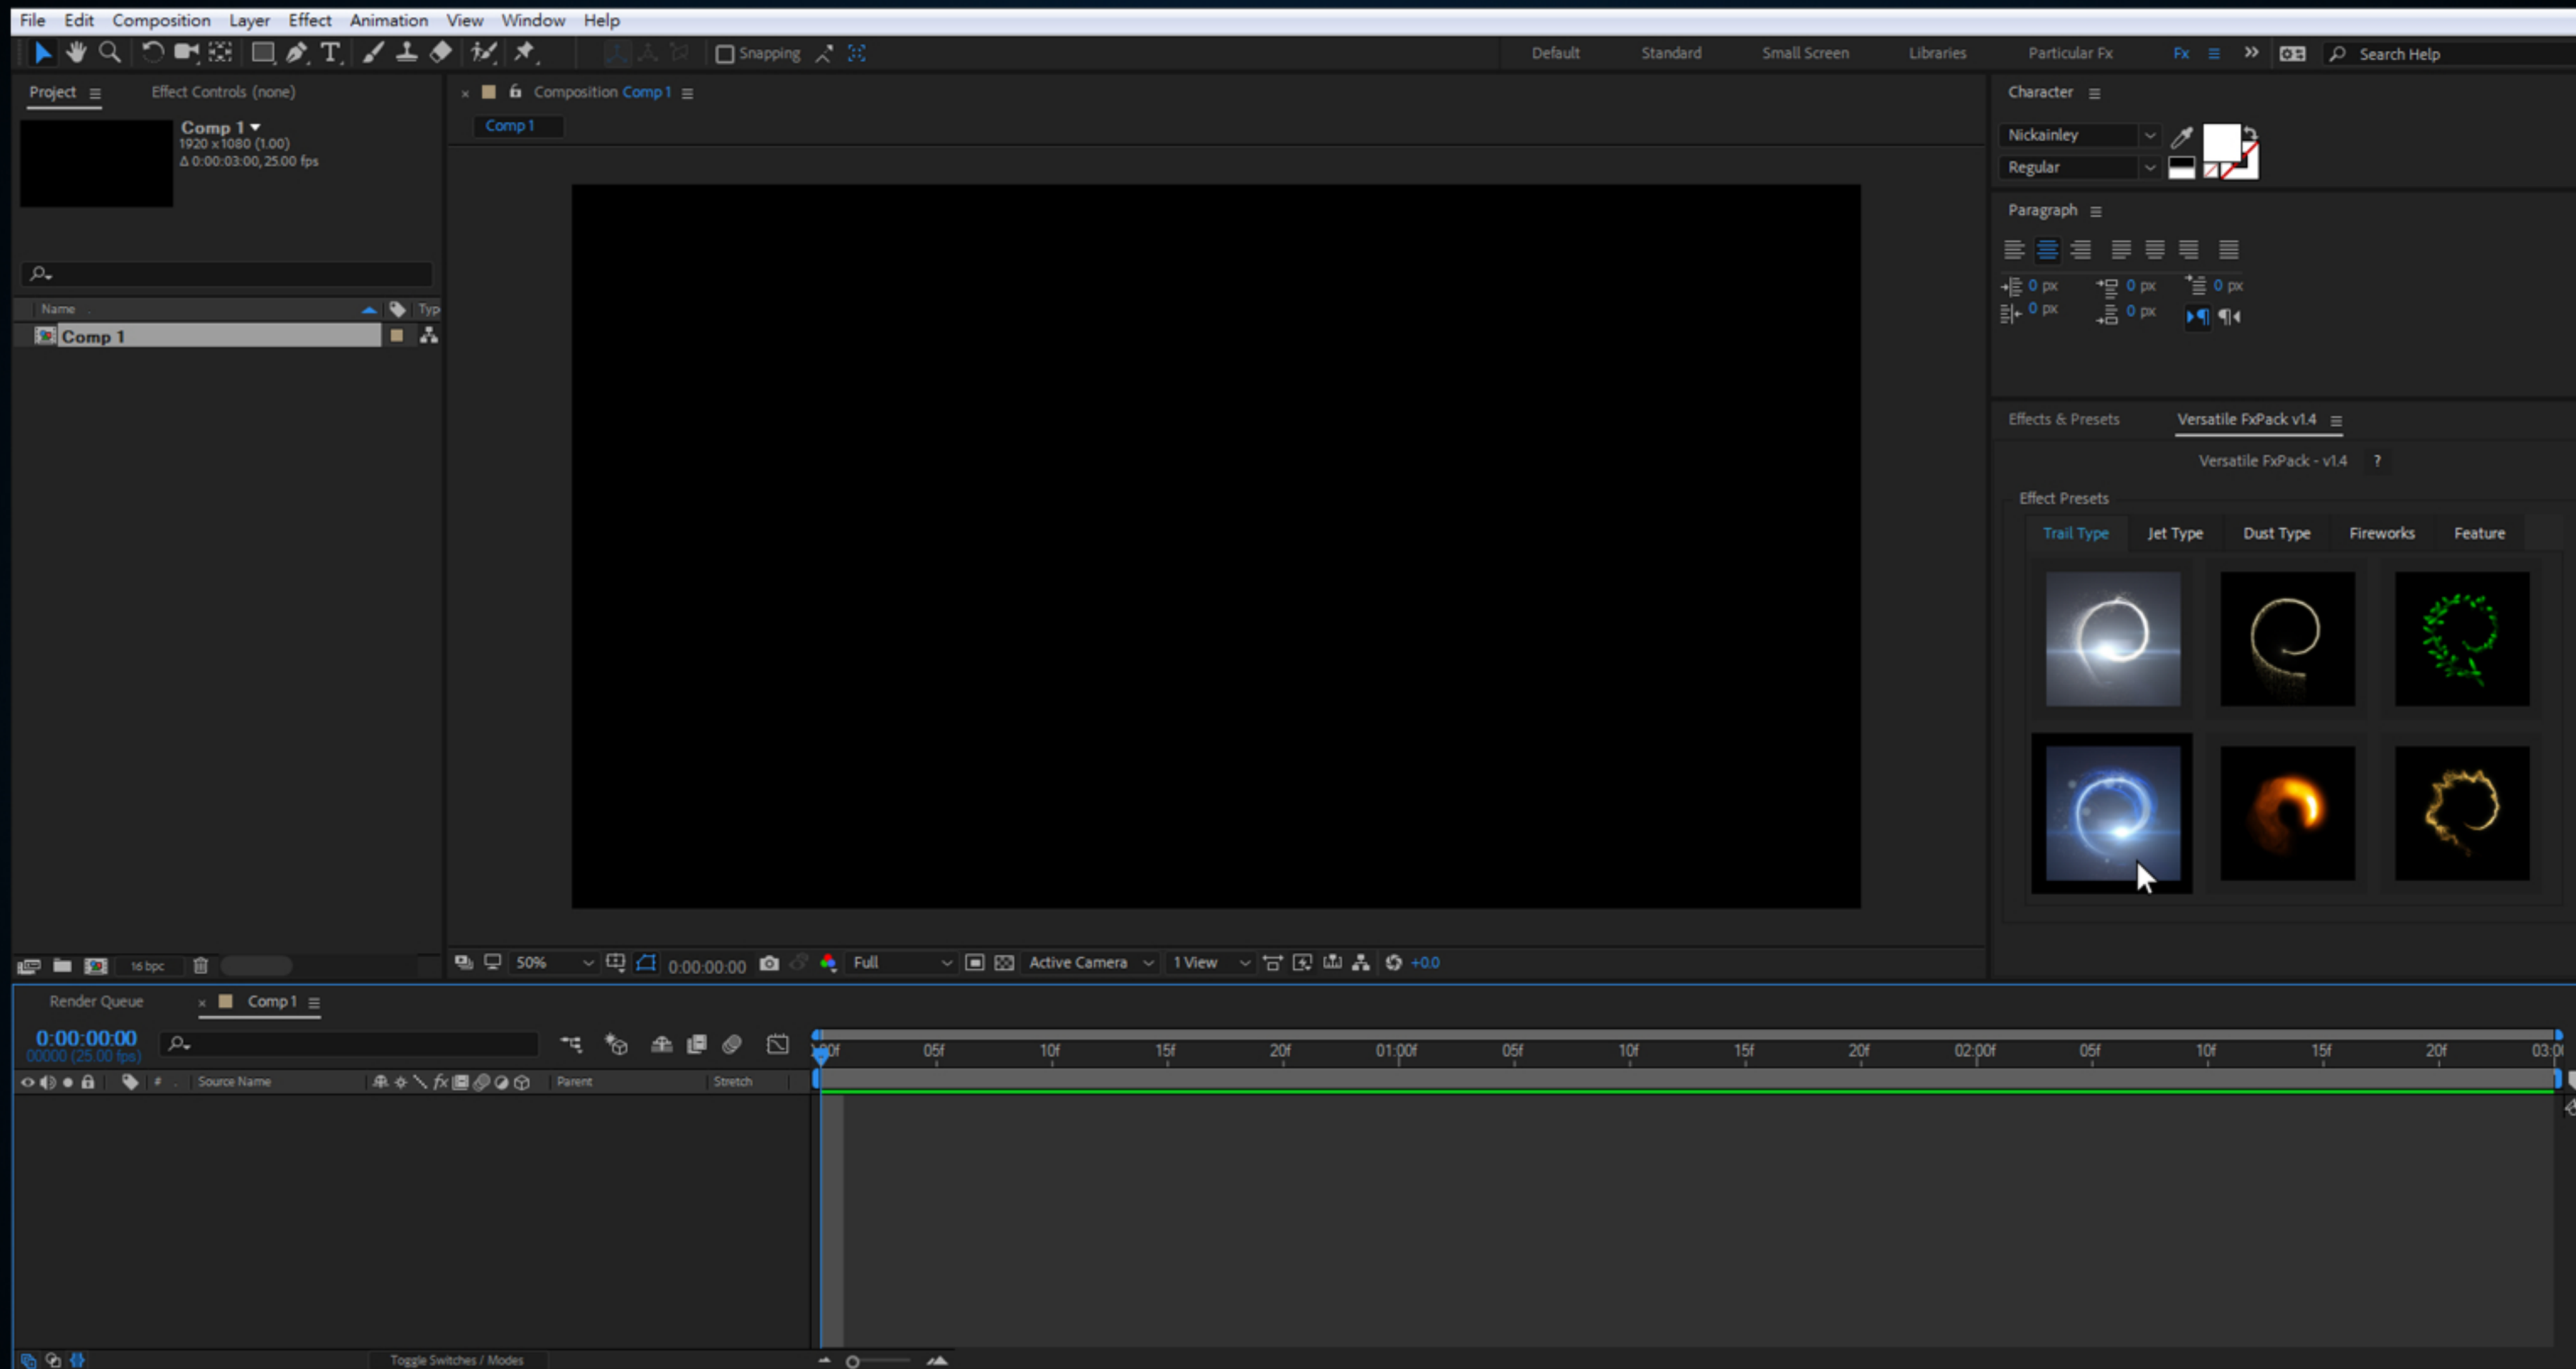

Click Use legacy UI and relaunch to change the panel outlook.

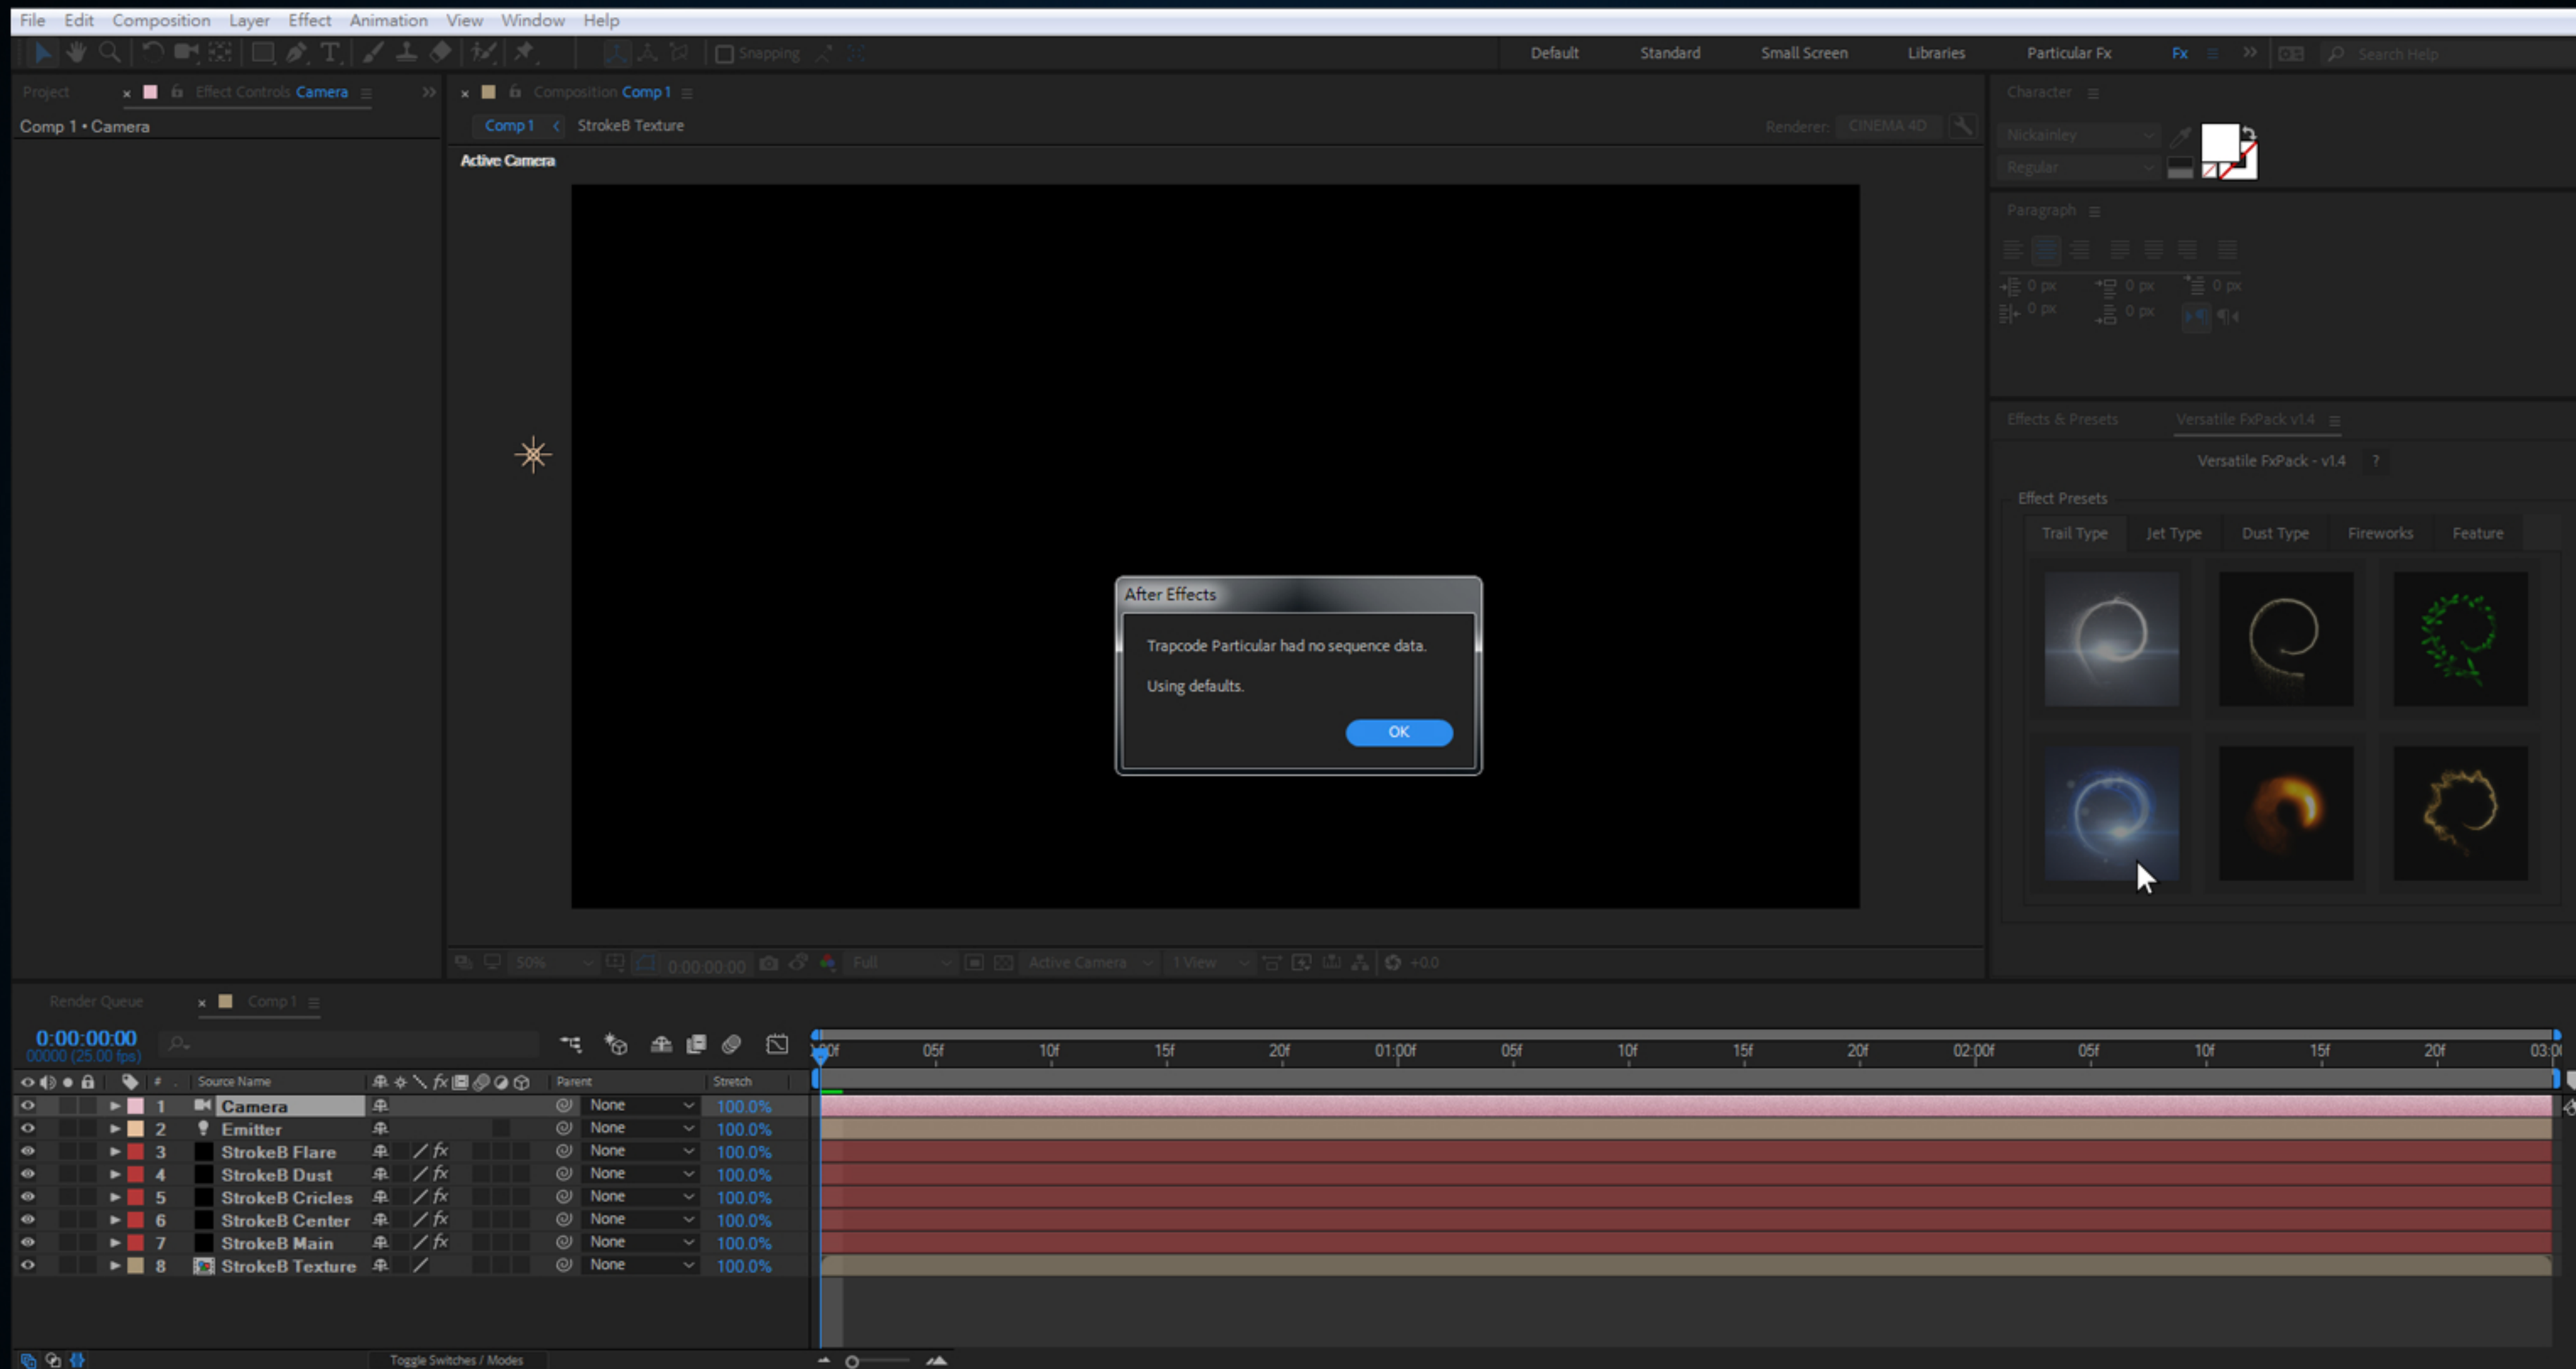

Select a composition, recommend 1920 x 1080 and 3 sec at least. (16 bpc)

Choose the preset you want to use.

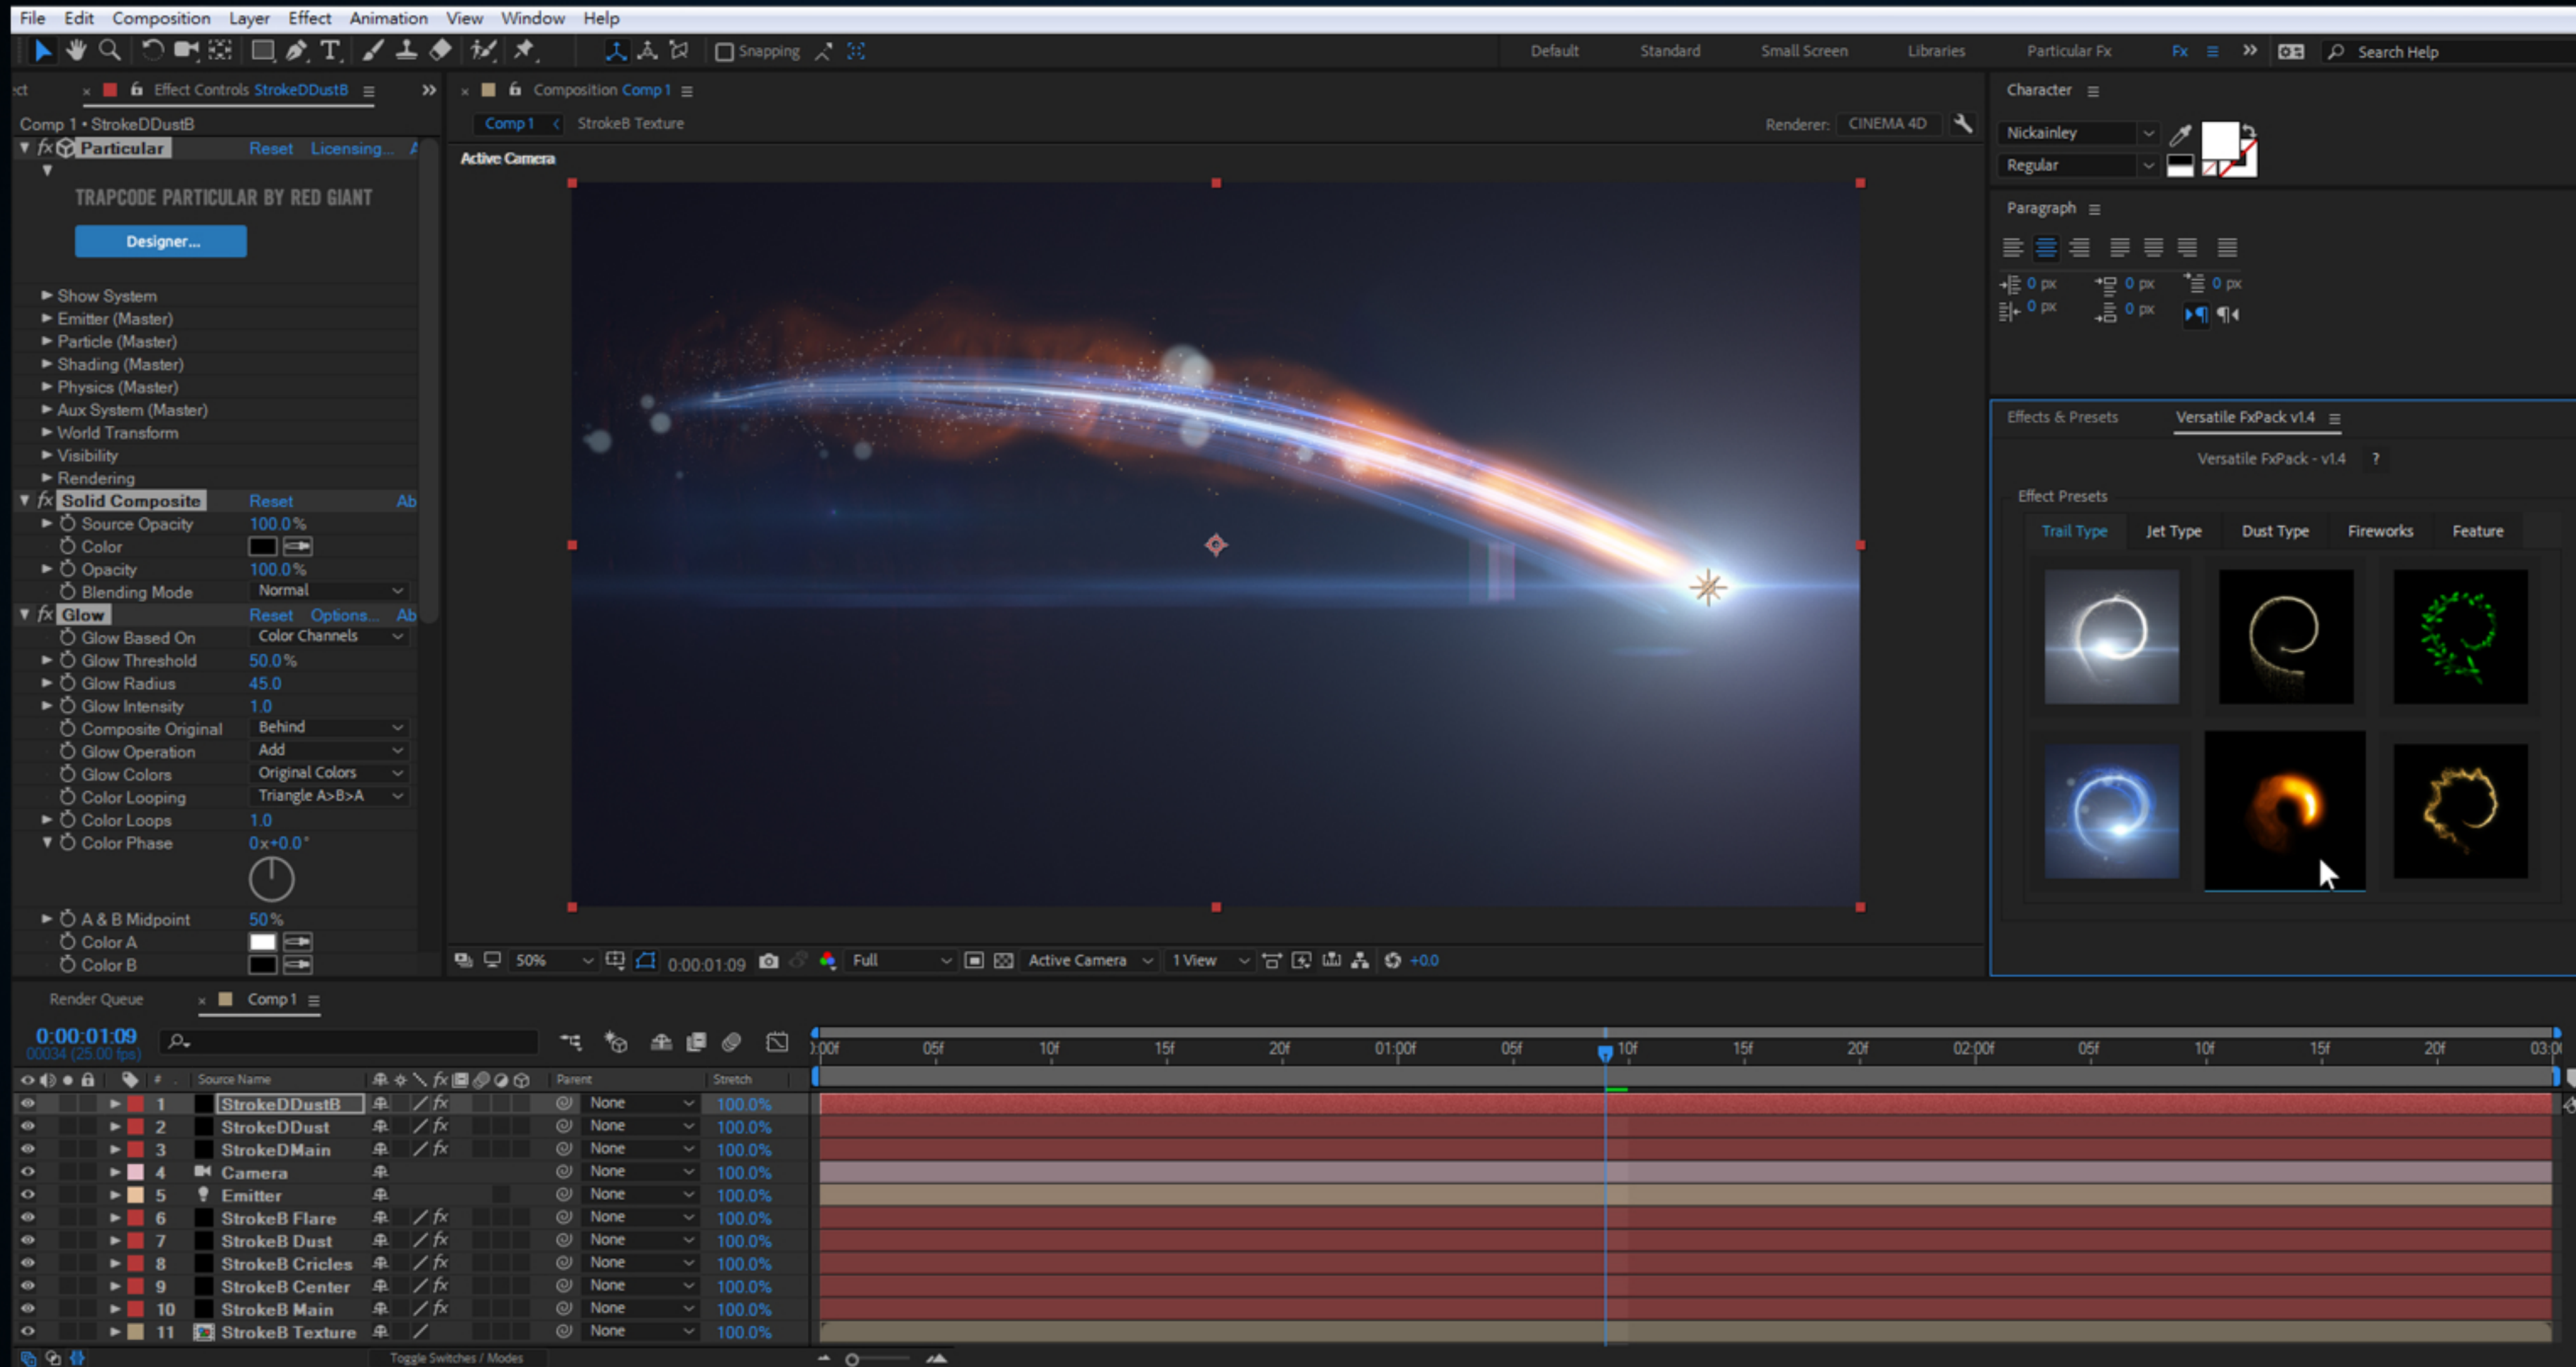

If After Effects message you “no sequence data” , just click ok.

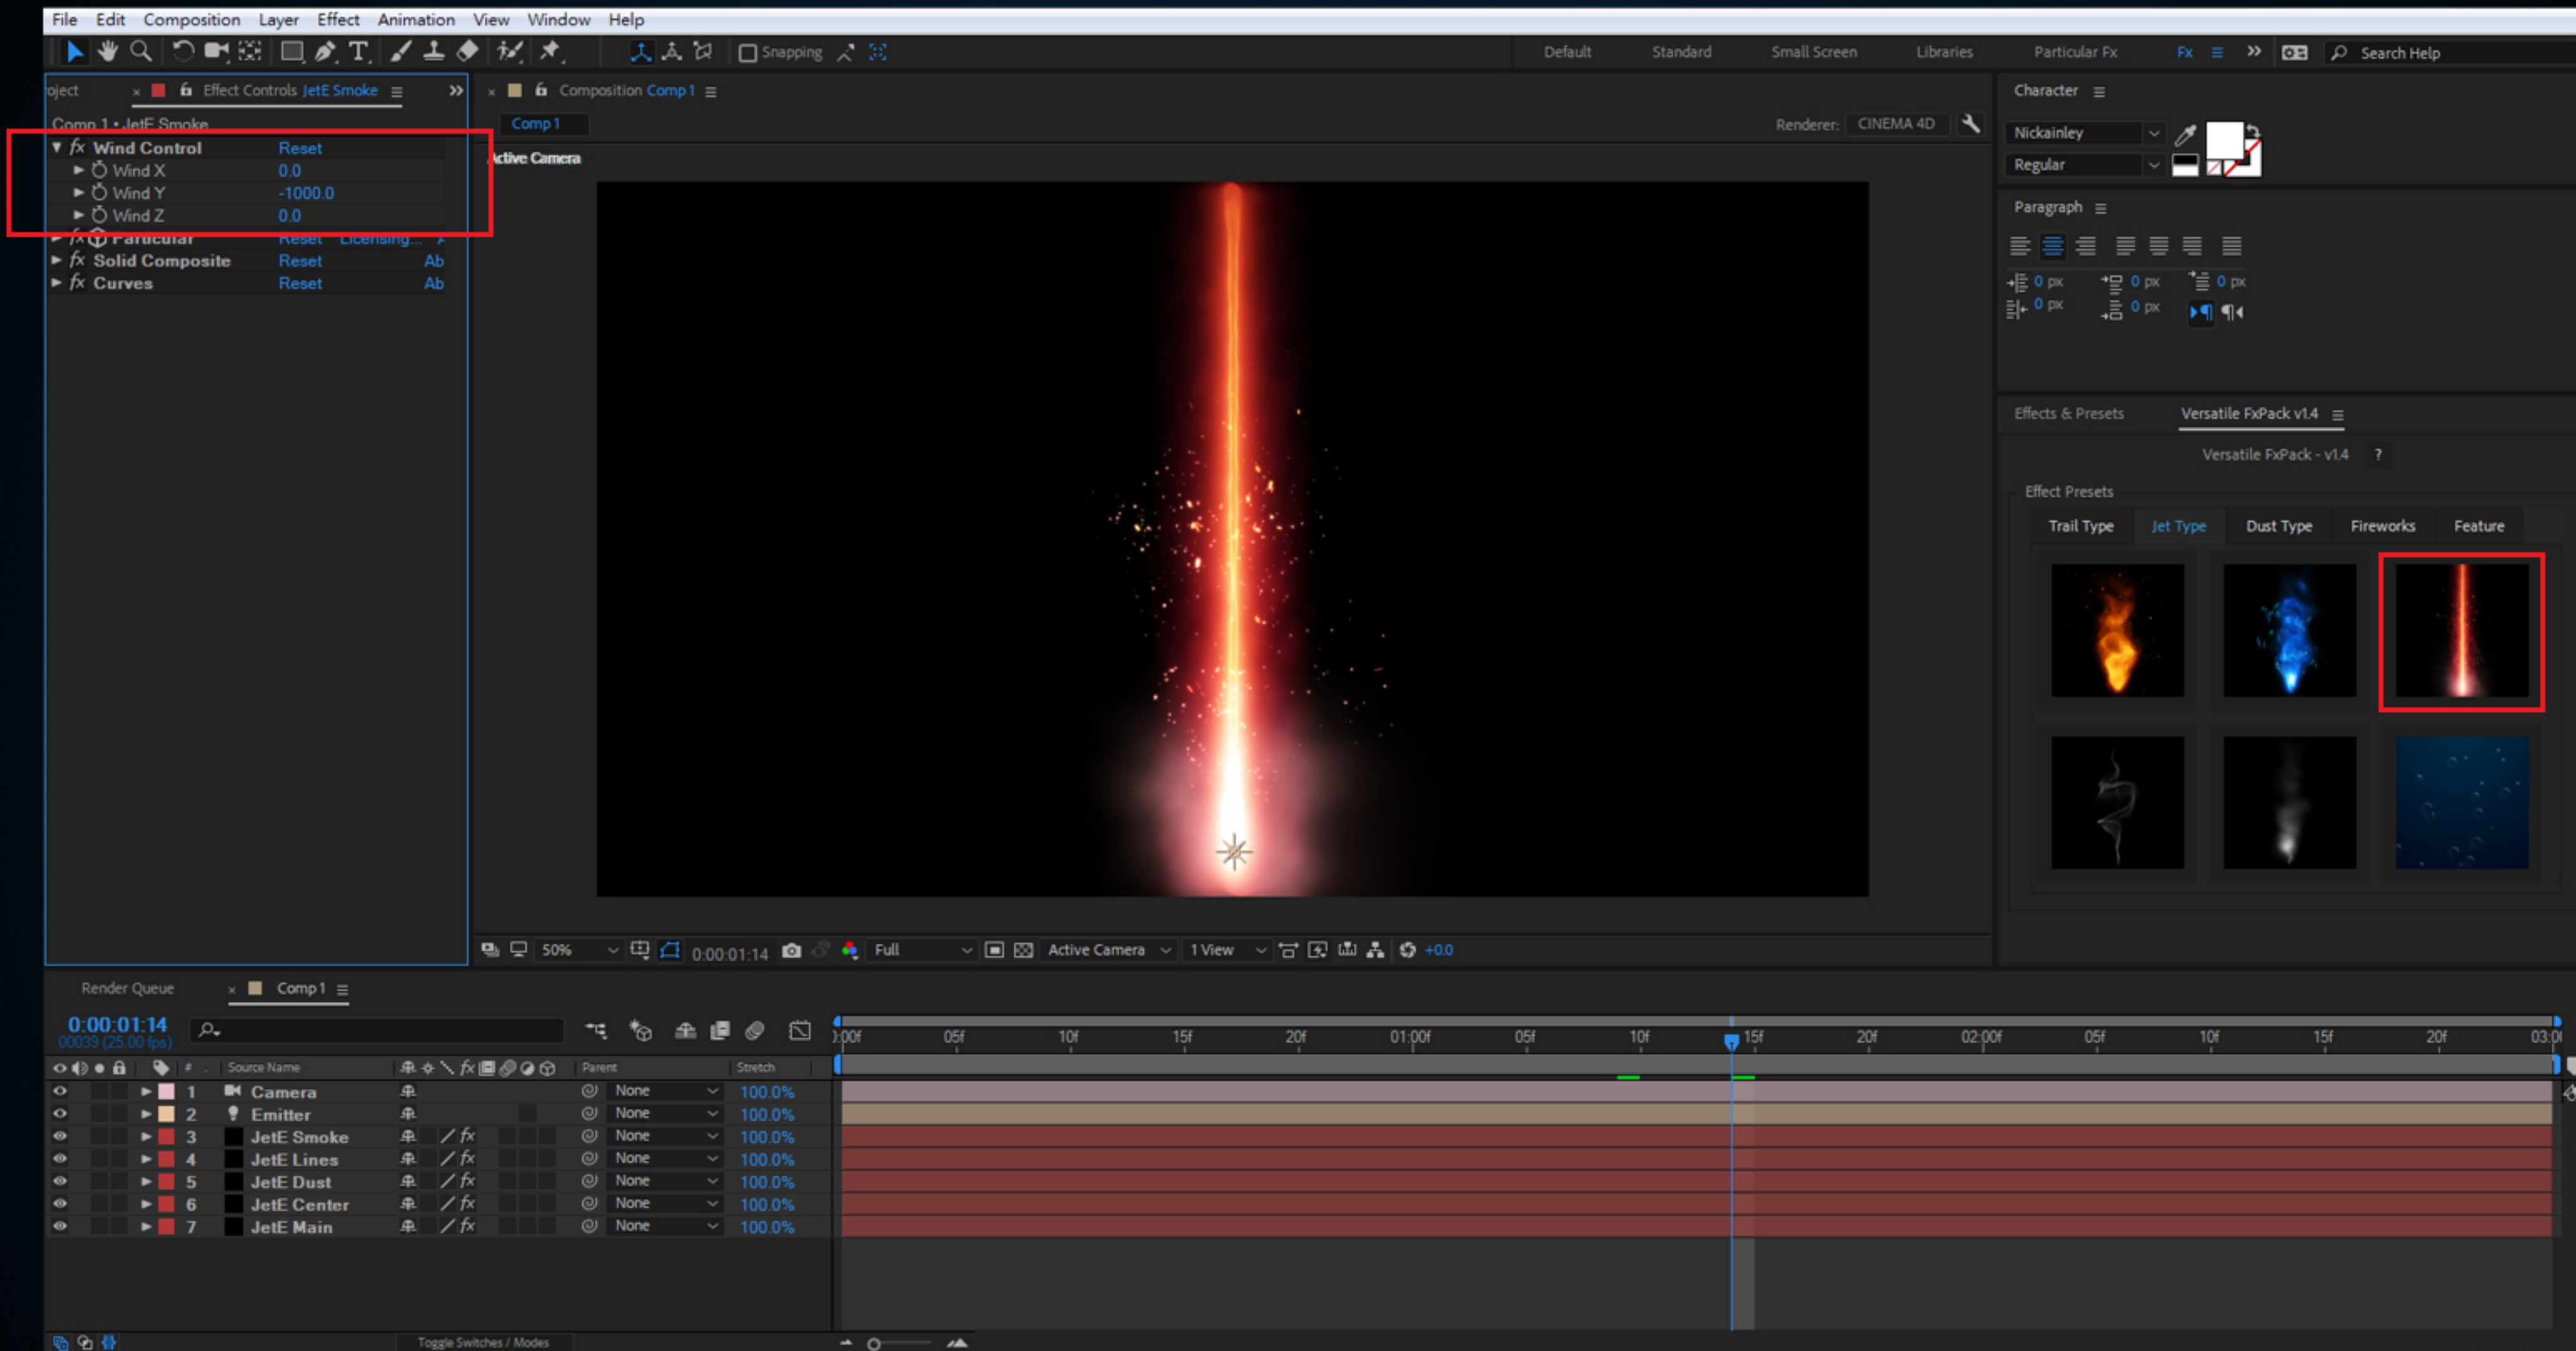

The effect will applied into the composition.

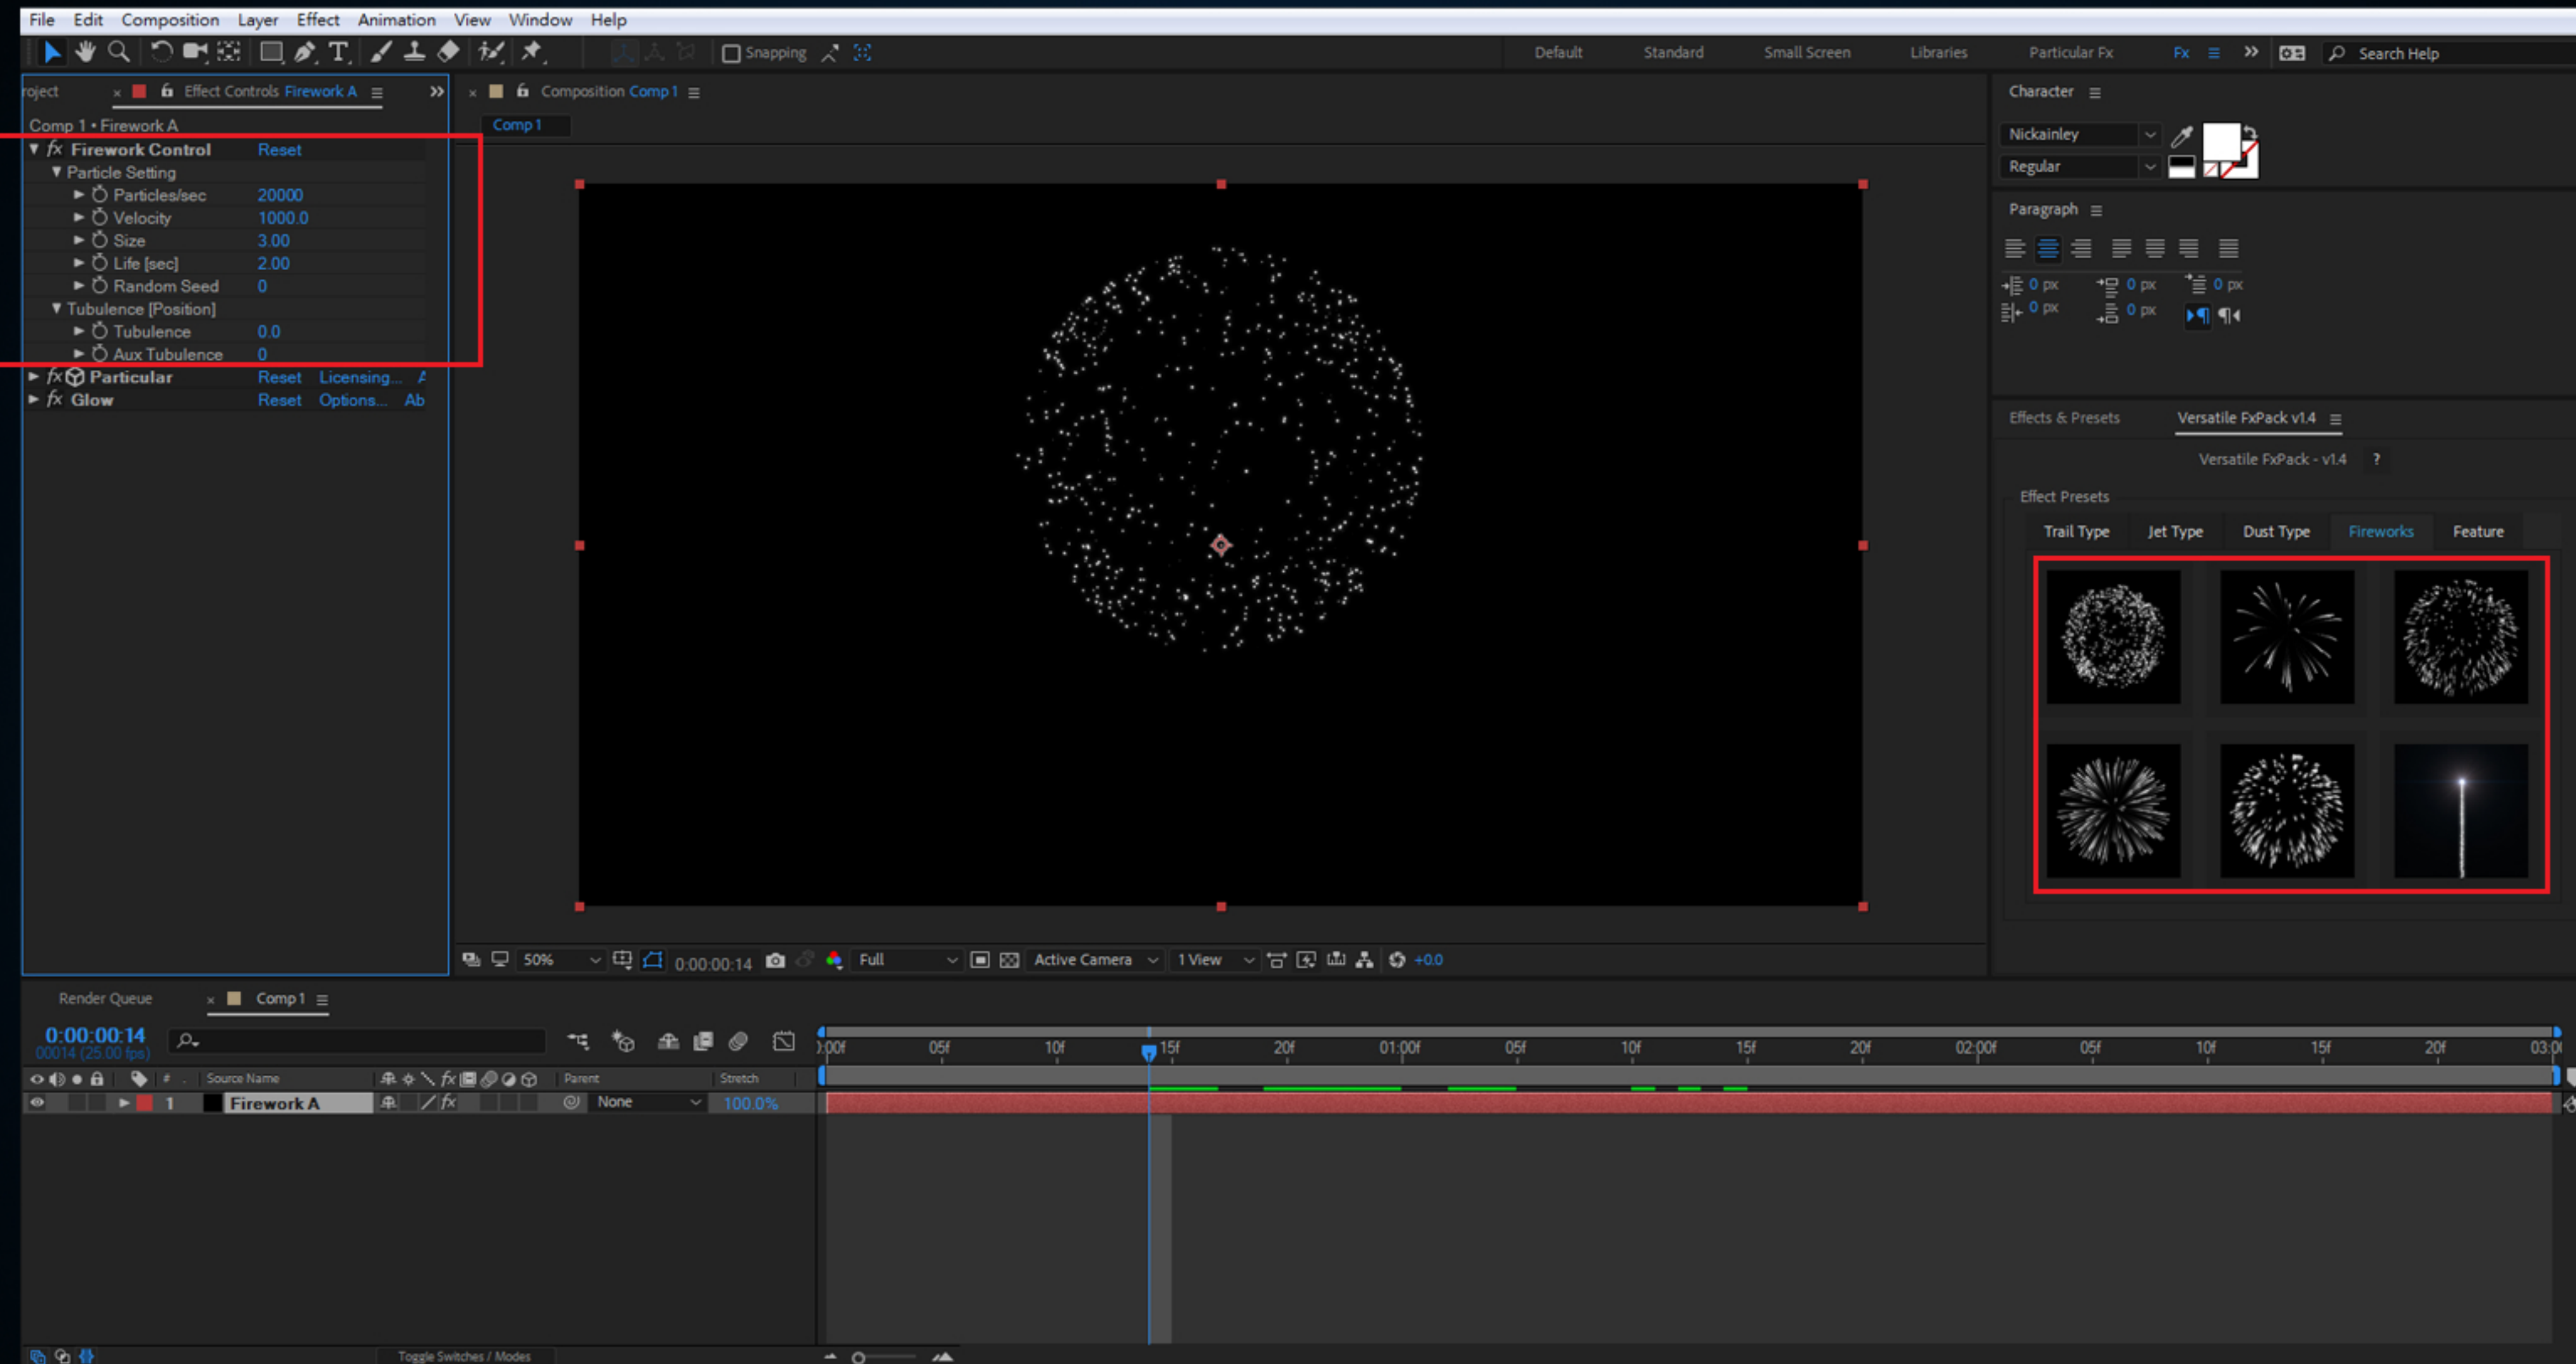

If you already have layer call Camera / Emitter, it will not create one more Camera / Emitter. So you can mix different effects together in few clicks.

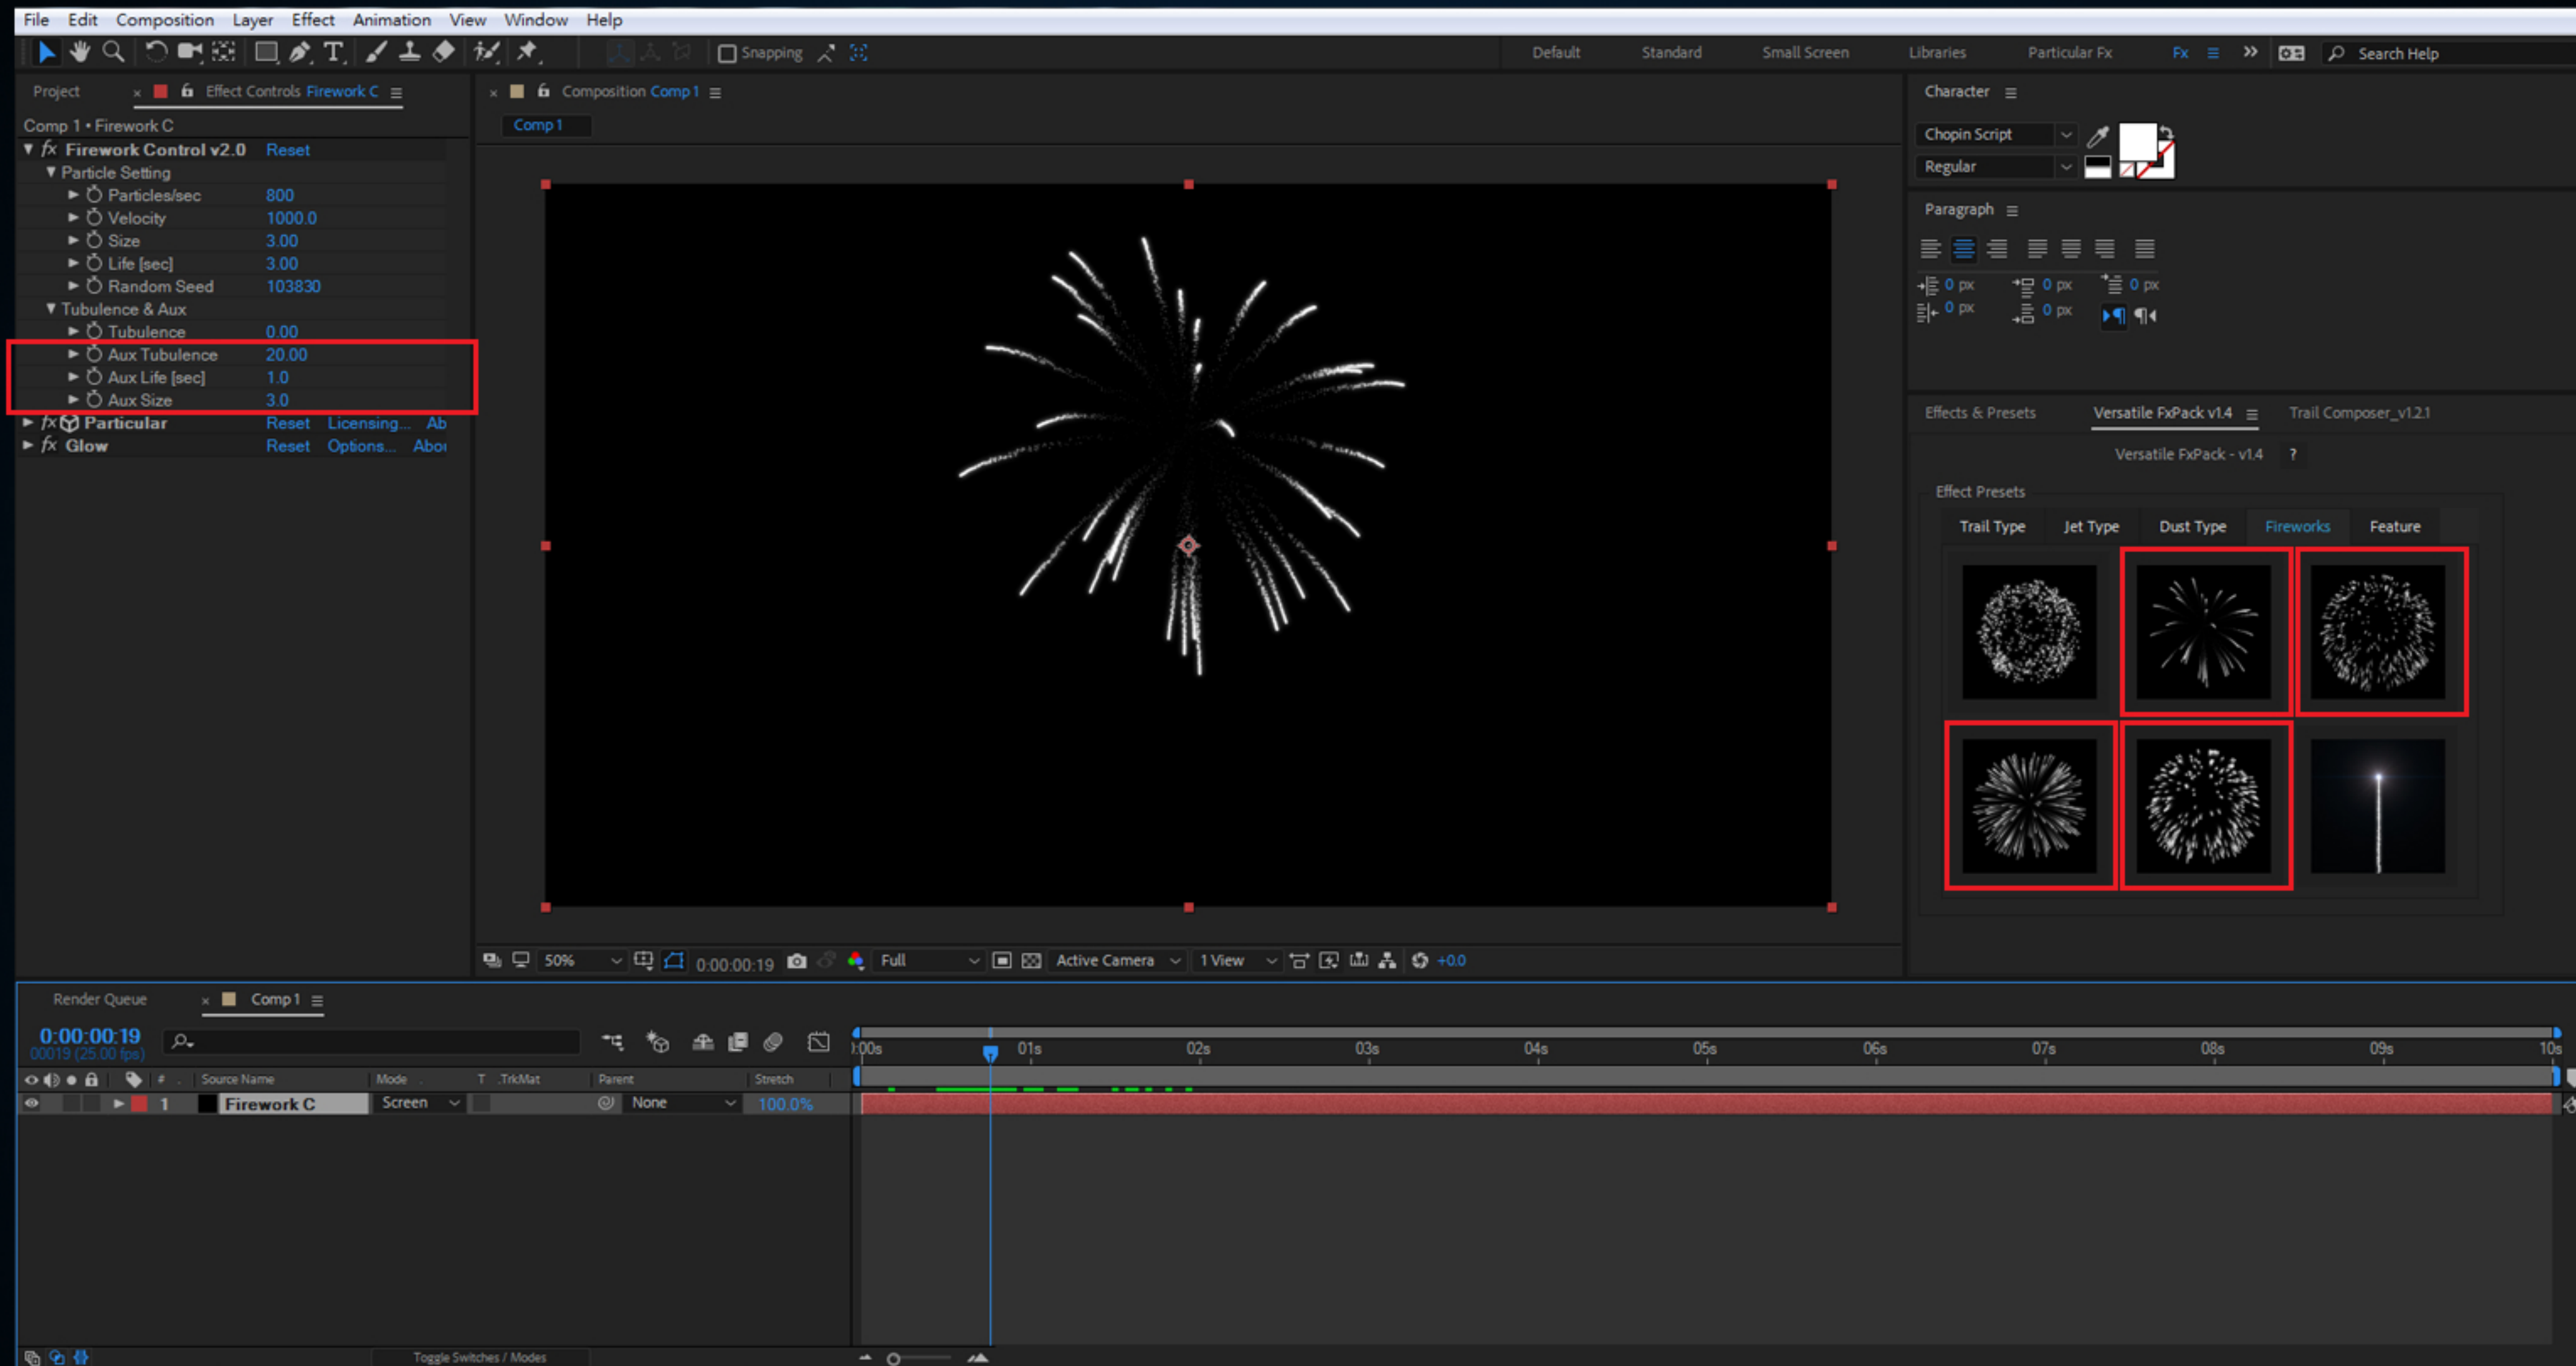

Every layers of “Jet E” are containing Wind Control,  
all parameters are linking with Particular.

All Firework presets contain Firework Control,  
all parameters are linking with Particular.

Particles of Firework B, C, D, E are created with Aux System.  
You can change Aux particle Turbulence, Life, Size in “Firework Control v2.0”

Enjoy :)
